The Town of Sullivan's Island reserves the right to reject any and all submissions or any parts thereof and to waive any irregularities or minor informalities in any submission or in the procurement process and to make a contract award in the best interest of the Town of Sullivan's Island.

This project is being funded in part by the South Carolina Infrastructure Investment Program (SCIIP), which is administered by the South Carolina Rural Infrastructure Authority (RIA) and funded by federal State and Local Fiscal Recovery Funds (SLFRF) through the American Rescue Plan Act (ARPA). All federal SLFRF requirements and SCIIP requirements will apply to contracts funded by the American Rescue Plan Act (ARPA).

1. INTRODUCTION

The Town of Sullivan's Island is issuing this Request for Qualifications (RFQ) to identify a qualified civil engineer to provide a full range of engineering services to support the implementation of island-wide stormwater improvement projects. These services will be provided under contract with the Town of Sullivan's Island, as part of grant funding awarded by the South Carolina Rural Infrastructure Authority (RIA) through the South Carolina Infrastructure Investment Program (SCIIP) under SCIIP Grant #A-23-C188 and RIA State Grant #S-23-C188.

1.1. Method of Procurement

This is a qualifications-based selection. Award will be given to the most responsible, responsive and most highly-qualified engineering firm based on the factors outlined in Section 5, SELECTION CRITERIA. Cost is NOT a factor in the ranking of firms to provide services herein. DO NOT include any reference to consultant costs in the RFQ response. Any RFQ response with any discussion of cost will be disqualified. Contract fees will be negotiated after selection based on the project scope. A general scope of work is outlined below.

Firms are advised that this evaluation and selection process is a competition and not simply a prequalification. It is the intent of the Town of Sullivan's Island to award the contract to a single Firm.

1.2. Project Description

The SCIIP funding will be used to improve the functionality and capacity of stormwater drainage in four separate service areas of the Island: Station 16, Station 25, Station 28.5 and Station 31 watersheds. The Town's current drainage system was installed by the South Carolina Department of Transportation around the 1950s, consisting primarily of 15-inch to 18-inch diameter reinforced concrete pipe. This system has become antiquated and is unable to provide reliable service beyond typical rainfall events (>2 inches) and is exceeded in its capacity during 1-year, 24-hour rainfall events (>3.54 inches).

The project's proposed scope and construction activities generally consist of increasing conveyance for stormwater main lines, making ancillary improvements to lateral lines, and incorporating tidal backflow prevention and manufactured treatment devices (MTD) at each outfall. A general description of each service area is noted below with a more detailed project description located at this link: [TOSI SCIIP Application link](#)

1. Station 16 watershed- ±48 acres of service area. Intended to mitigate existing flooding along Middle Street and Station 16 (considerable impacts seen between Poe and Atlantic Avenue). Project includes upgrading the mainline to 24 to 36-inch pipes along Middle Street to the outfall, adding new inlets, piping throughout the service area and incorporating check valves and MTDs where needed.
2. Station 25 watershed- ±53 acres of service area; Project includes 1,940 linear feet of piping, 16 inlets with manhole structures, one check valve and one MTD. The existing 18-inch mainline from Raven Drive to Atlantic Avenue will be upgraded to significantly larger pipes; 18-inch to 48-inch at the outfall; to 18-inch to 30-inch piping near Atlantic Avenue.
3. Station 28.5 watershed- ±89 acres of service area. Includes upgrades to the existing outfall and

mainline along Station 28.5 increasing diameter from 18-inch to 42-inch in addition to upgrading most of the connecting upstream and adjacent drainage system. Additional improvements will take place with most undersized pipes and small open ditches along l'On Avenue and Atlantic Avenue.

4. Station 31 watershed- ±83 acres of service area; Represents the largest low-lying depressional area and includes 3,245 linear feet of piping, 19, inlets and/or manhole structures, two check valves, and two MTDs. Includes upgrading the existing outfall piping beneath Jasper Boulevard, existing culvert beneath Middle Street, existing pipe along Middle Street and Station 31 and new piping along Station 30 and 31. All new piping will require upgrades to drainage inlets and check valves and MTDs will be installed at the Jasper Boulevard outfall to prevent backflow of tidal waters.

The final plan deliverable must have the highest level of credibility based upon data-driven, expert analysis. Therefore, the Town seeks an experienced firm that is familiar with these types of projects and can work within the intent of the program. The selected firm will provide comprehensive data analysis which will stand intense public scrutiny, and the final product must be easily defensible due to its intellectual rigor.

The application for SCIIP funding, which includes a detailed project description as well as preliminary engineering information, can be found here: [TOSI SCIIP Application link](#)
